6 D3M Services

Mobile Application development service

Our team has highly qualified and experienced programmers, dealing with the development of mobile applications, designed for the specific needs of our customers. The development department is following the best practices and techniques to build powerful user experience driven mobile applications. Our apps are fully compliant with the App Store Review Guidelines and the Android development best practices. Our company has experience developing a large range of native and hybrid mobile apps for smart phones and tablets running Google's Android and Apple's iOS platforms. We have a wide range of experience across a number of industry sectors such as Media & Entertainment, Tourism, Engineering & Construction, and Retail & Consumer with applications such as news readers, mobile shops, map guides with points of interest, hotel reservations, car rental applications, mobile tools, etc.

Our team are using Agile model which is a combination of iterative and incremental process models with focus on process adaptability and customer satisfaction by rapid delivery of working software product. Agile Methods break the product into small incremental builds. These builds are provided in iterations.

DBA Services

Database Administration services can provide the very necessary 24x7 support to take care of database administration tasks ranging from mundane work to specialized solutions like RAC & Data Guard.

Typically, the services offers proactive Oracle monitoring solutions that include expert methods that create a preemptive protection layer to ensure continuous availability of all mission critical Oracle databases and all aspects of Oracle, including the server, disk, and network.

www.d3m-tech.com

- Database Installation, Patches & Upgrades & Refreshes

- **Virtualization Solutions:**
 - Vsphere.
 - RHEV.
 - High Availability.
 - DR Solutions “SRM”.
- **Backup & Data Protection Solutions:**
 - Protect Data Backups using NetBackup.
 - Disaster Recovery and Bare Metal Restore.
 - Archive Data using Symantec Vault.

Application Service

Maintaining your business is unique. Having inbox solutions software might not suit your business and technology goals. Although you have the option of modifying your business to work around the software, it isn't always possible or desirable to do so. IT solutions should conform to your business, not the other way around.

Customizing prepackaged solutions or developing applications from scratch may better provide the functionality your business requires, but development work is fraught with its own challenges. Often, it necessitates venturing into new technologies, and you may be limited by the bandwidth of in-house staff. To further complicate the process, you may need to integrate your new systems with other key internal and customer-facing applications and/or migrate critical legacy data.

Employing the seasoned flexibility and deep experience of an outside consultant/developer can ensure you successfully develop and integrate the exact IT solution you need without wasting time and financial resources.

D3M developers and project managers have the skills and experience to meet your technology and business goals.

Big Data Solution

Deliver your new competitive strategy on a unified architecture that provides end-to-end data liquidity, tailored scalability, and security and privacy from the inside out. Innovate on a foundation of big data management, integration, analytics, and applications.

D3M Big Data solutions address a range of customer needs including business analytics, customer experience, fast data, and social cloud solutions to enable innovation, increase operational efficiency, and simplify IT.

www.d3m-tech.com

The promise of Big Data analysis is direct access to more data, in raw formats, directly from the source. This includes well-structured data as well as data that are not yet fit for analysis. D3M Technologies enables analysts of all backgrounds, technical and non-technical, to access and transform raw data into actionable data. With a user experience designed to support agile data exploration, D3M Technologies combines machine learning with human input to speed data transformation.

Our aim is to simplify the complexity of big data analytics and empower everyone to make data-driven decisions in minutes, not months. We believe you shouldn't need a data scientist or multiple, technical tools to model, integrate, cleanse, prepare, analyze and visualize your data. D3M is the one-stop-shop for getting all your data into Hadoop, analyzing that data, and visualizing your results.

IT Outsourcing

Outsourcing to D3M completely eliminates the costs of recruiting, hiring, training and payroll taxes. You don't have to deal with the stress of finding and hiring new people or reducing your work force when they aren't needed. Additionally, our decade old strong foothold in IT Solutions and Training enables us to offer end-to-end solutions to our clients across the region.

Simply we certainly give you more time to concentrate on your core business and, at the same time, save you time, money and resources.
